

TECHNICAL INFORMATION

INTRODUCTION

BAHNM promotes holistic methods of animal management, nutrition and medicine solely in the pursuit of optimum welfare. Information and advice is provided on a range of associated subjects. This is based on –

- In - house research
- Clinical experience of holistic veterinary surgeons
- Research in the peer reviewed academic literature

Technical information - downloads from this website

Generally the principles of holistic nutrition and medicine can be easily and safely embraced, but as the circumstances in which they are applied are obviously outside the control of the BAHNM, the ultimate responsibility for the use of any information provided must rest with the animal owner. The free technical e-mail helpline will provide specific advice relevant to individual circumstances if required.

Free technical help

BAHNM provides free technical advice relating to the prevention and management of chronic ailments. Advice is given on the understanding that it should not be interpreted as being on the basis of a diagnosis of disease, which cannot be done unless the animal is also properly examined.

If an animal is in pain or distress and a local veterinary surgeon practicing holistic medicine cannot be consulted, the services of a conventional veterinary surgeon must be sought. Enthusiasm for holistic methods should not be allowed to contribute to poor animal welfare.
